Course Materials

POINTFUL
EDUCATION

Select Pointful Education **certification** courses require specific software (Course Materials) which are not provided by Pointful Education. The purpose of Course Materials is to provide students with hands-on learning opportunities in which they gain experience working with the software related to the course. This will ensure students have the necessary experience and practice required for success on the certification exam.

All Pointful Education Customers must obtain such Course Materials from a third party, either as a free download (*) or at their sole cost. Additionally, meeting the software system requirements is the responsibility of the Customer, therefore, it is recommended that the process of procuring and ensuring software system requirements are met is started as soon as possible to ensure a seamless experience for teachers and students.
